

Steps		Justification	Materials Required	Time taken
Task 1: Researching- 10th-14th February				
1.1	Researching the rules and requirements (Numbers of players, game pieces, etc) of each game	The rules and basic requirements for some of these games were further researched so that the game can be played with convenience on the product.	- Windows/Mac Operating System - Web browser - Youtube Videos - Websites - Rule books - Google Docs	1-2 Hours + Resources Collected
Task 2: Planning- 15th-16th February				
2.1	Measuring and Marking (For Cutting and Painting)	This step was crucial to understand the part of wood that needed to be cut. Additionally, this step was used to create distinct lines for painting.	- Purchased Wood - Rolling Parallel Ruler - Measuring Tape - Pencil	2 Hours
2.2	Cutting and Carving	This step involves the pieces of wood being cut to the right measurements based on the success criteria created. Additionally carving is the step required for the star checkers board.	- Electric Saw - Plug Point - Filer	15-30 mins
2.3	Filing and Smoothing of edges.	This step will enhance the safety aspect of the product as all the sharp edges will be smoothed. This will also be used to carve the star checkers board.	- Filer - Sandpaper	15-30 mins
Task 3: Aesthetics- 20th-22nd February				
3.1	Painting the border/exterior part of the product	Each side of this cube product included a border. This step gives the board a colour to enhance the aesthetics of the product.	- Black and Brown Paint - Size 6 Flat brush - Apron	2-3 Hours
3.2	Designing Each of the board games.	This product includes 6 board games. This step can be executed with the help of existing board games. Except Chinese Star Checkers, all the games can be printed, laminated and stuck on the product. Chinese Star Checkers needs to be carved in.	- Windows/Mac Operating System - Web browser - Existing Board game designs. - Canva - Colour Print - Lamination - Drill - Filer	3-4 hours

			- Sandpaper	
Task 4: Arranging the product together- 23rd February				
4.1	Nailing all the sides of the wood together	This step would create a setup for this entire product. By nailing the pieces together, the cube structure would be formed.	- Nails - Hammer - Pencil	1 hour
Task 5: Finishing Touches- 24th-25th February				
5.1	Attaching the Hinges to the top piece of the product.	This step will allow the top piece of wood to detach to create a storage compartment within the product.	- Sketch Pen/ Black pen - Drill - Screws - Hinges - Screw Driver	30 mins
5.2	Attaching the Lock on the other end of the top piece	This step will allow the top piece of the product to remain in place when rotating the product.	- Sketch Pen/ Black Pen - Screws - Drill - Screw Driver - Lock (Includes 2 pieces)	15 mins
5.3	Attaching the hooks on the inside	This step is essential for the storage aspect of the product. These hooks will be placed in the inner part of the product. These hooks will be used for bags for the game pieces.	- Pencil - Ruler - Stick-on Hooks	15 mins
5.4	Printing and Laminating Boards + Sticking on the product	This step is incorporating the board game in the product. The laminated board will be stuck to the board with the help of a gun tacker.	- Laminated Printouts - Gun tackers	Printing and Laminating + 10 mins for the Gun tacker

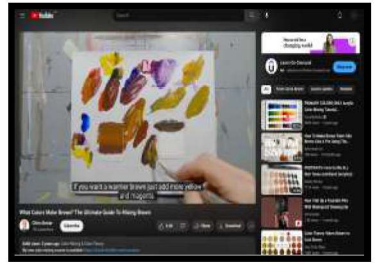

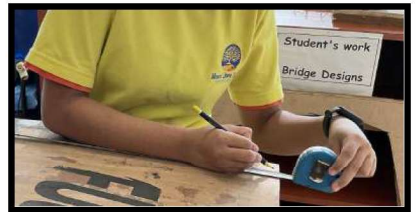

After writing the steps and the explanation for each of the steps, it is vital to **form** a tentative plan on creating the product. This table includes the task breakdown based on the time taken on each step. This Gantt Chart includes the number of days taken to complete the task.

Steps vs No. of Days	1	2	3	4	5	6	7	8	9	10	11	12	Start Date
Task 1													10/02/2023
Researching													10/02/2023
Task 2													15/02/2023
Measuring													15/02/2023
Cutting													15/02/2023

Filing													16/02/2023
Task 3													20/02/2023
Painting													20/02/2023
Designing games													21/02/2023
Task 4													23/02/2023
Nailing													23/02/2023
Task 5													24/02/2023
Hinges													24/02/2023
Lock													24/02/2023
Hooks													24/02/2023
Gun tacker													25/02/2023
Start Date:	10th February		End Date:	25th February		Total Days Taken:		15 Days					

C2: Demonstration of technical skill:

When **creating** this product, I certainly **developed** several skills throughout the process. This table includes the skill **developed** along with the description of the same and how it was used in the creation of the product. Furthermore, each skill has its evidence. These skills were divided into Research Skills, Planning and Designing, Aesthetics and Product making skills.

Skill Developed	Description	Skill Use	Evidence ⁹
<i>Research Skills</i>			
Researching and processing information	This skill is the collecting and processing of data to further help with designing and making of the product. This included the requirements for each board game.	This skill was used when researching the requirements and designs for different board games, the amount of game pieces and how to play each of these games. This skill was executed with the help of several websites and videos and Google Docs to document the information.	
<i>Planning and Designing</i>			
Measuring and Marking points/lines	In this skill, one can use a pencil or other drawing material along with measuring equipment to mark the necessary parts of a wood piece.	This skill was mainly used to measure and mark the parts which need to be put out to create a perfect 15 x 15 inch cube. Additionally this skill was used to mark the sections that needed to be painted.	

⁹ Evidence for technical skills in Appendix C.1
