

		of adolescent children. (Refer Appendix A1)	incorporate protein with ease while using supplementing agents to add the remaining nutrients.
Which fruits or vegetables can be used to provide macro and micro nutrients?	Medium	Primary Ms Dhara Mavuleti, a renowned nutritionist, specialising in the needs of adolescent children. (Refer Appendix A1)	Supplementing ingredients are incredibly important in determining the nutritional content and flavour profile of snacks. Choosing the correct ingredients can ensure cost-effective production, calorie efficient nutrition, and good flavour.
What flavours are the most appealing to children aged 10-14?	Medium	Website (Refer Appendix C)	Children aged between 10-14 tend to be picky eaters, resisting the consumption of many traditional or conventional homemade flavours. Conducting in depth research of the target audience can help determine the best flavours to develop, and thus appeal to the masses.
What cooking process would be the most effective at maintaining nutritional quantities and using the minimum fat?	High	Website (Refer Appendix C)	Through conducting in-depth research into the various cooking methods and processes that allow for the reduction of calories and most appealing flavour profile, the snack can appeal to the masses.
Packaging & Storage			
Which preservative would be the most effective at expanding shelf-life yet not harming the consumer?	Low	Website (Refer Appendix C)	The Indian market tends to reward long term shelf-stable products. Long term storage of foods gives retailers an opportunity to sell higher volume with less risk, while also allowing buyers to store the product for longer. Such added conveniences would further bolster the product's market appeal.
Is there a method of storage that would allow preservatives to be forgone?	Low	Website (Refer Appendix C)	It is well known that preservatives have been deemed unhealthy across the world, and in an ideal situation - they must be forgone. In order to further bolster the healthy image of the product, determining a form of storage which allows for it to be forgone is crucial.

Strand 3: Analyse a range of existing products that inspire a solution to the problem

Aspects for Analysis

Nutritional Profile The basic indicators of nutrition such as protein, iron, fibre, carbohydrates, fats, calories and any other key parameters..	Ingredients and Processing The type of ingredients used (artificial vs natural), the means of sourcing, extent of processing and usage of preservatives.	Taste and Texture Feedback from longtime consumers to reflect on the flavour profile of the product, mouth feel (crispy, crunchy,etc).
Pricing and Affordability The cost of 1 unit of the product, the apparent value for money and accessibility by the target market.	Branding and Positioning The marketing strategy behind the product, the way through which the message is conveyed, and the contributing factors.	Market Reach The ability of the product to reach their target market, the people who would benefit from such products and those who need them.

Product 1: Snackible

The Indian snack company Snackible provides better snack alternatives made for modern consumer groups along with affordability and portability. The company maintains a distinct

branding identity together with powerful digital reach through which it presents baked chips among several other items and flavored fox nuts and high-fiber cookies. (Refer to appendix C)

Aspect	Analysis
Nutritional Profile	Snackible offers a wide variety of products, including baked pizza sticks, coffee cookies, quinoa puffs and ragi chips. Across all these products, the company emphasises the importance of creating healthier, better for you snacks which do not jeopardize the traditional snacking experience. This is primarily done through the use of whole wheat flour, ragi or jowar flour, oats, chia seeds, and alternative cooking methods. Snackible is able to lower calories and fat content by air-frying and baking their snacks as opposed to deep-frying, helping preserve nutritional values too. The bestseller of the company, baked pizza sticks, is advertised as “rich in protein” and “source of dietary fibre” with “no palm oil” and “no maida”. This product (per 50g) contains 212 kcal of energy, 5.5g of protein, 34g of carbohydrates, 2g of dietary fibre, and 6g of fat. These are exceptional nutritional values for a snack that would be considered high-calorie and unhealthy if not made by Snackible. However, a single serving of baked pizza sticks contains 320 mg of sodium, more than 16% the daily recommended intake. The sauce provided alongside the sticks contains an alarming 280 mg of sodium, approximately another 14% the daily recommended intake in just 25g of product. It is essential to reduce sodium consumption to reduce the risk of developing high blood pressure or other cardiovascular illnesses.
Ingredients and Processing	Snackible focuses on providing healthy, and good for you snacking options without compromising on flavour. In order to do this they rely on the quality of their ingredients, ensuring only organic ingredients are used in the preparation of their snacks. In processing these ingredients and transforming them into finished products, they utilise baking or airfrying to reduce fat consumption and prioritise the retention of nutritional values. The company is also noted for its minimal use of preservatives, completely omitting them from all dry snacks and using only permitted preservatives (INS 211 and INS 202) along with antioxidants in their sauces. This company has been at the forefront of product development, developing innovative snacks like ‘Cheese Dosa Khakhra’ or ‘Korean BBQ Quinoa Puffs’. Overall, these products are relatively unprocessed, comparable more to homemade products, with quality ensured for all shipments.
Taste and Texture	The company offers a wide variety of flavour profiles and combinations for consumers to choose from, ranging from spicy to sweet. Over the course of the last 3 years, Snackible has received overwhelmingly positive feedback, with consumers highlighting the flavour the company has managed to preserve whilst making their snacks low calorie. In fact, some consumers have called the snacks ‘overly addictive’ due to their taste as well. Products like baked pizza sticks, ragi chips, or quinoa chips appeal to those who crave crunchy foods while quinoa puffs or khakhra appeal to those seeking a crispy treat.
Pricing and Affordability	The prices for various products vary, but a good representation of cumulative pricing is the ‘Bestseller Box’, which contains 10 snacks (rotated across the year based on sales) and is priced at a modest INR 599. Another benchmark would be the Peri Peri Ragi Chips (55g), priced at a low INR 47. These are pricing ranges in line with conventional snacks from brands like Lays or Doritos for this quantity. For the average Indian, Snackible is just slightly more premium than all other snack brands. The brand also has promotional offers and discounts regularly available, which can save between INR 50 and INR 500 per order.
Branding and Positioning	In recent years the company has done well to position itself as a tasty, yet healthy snacking brand, prioritising taste but not at the expense of the consumers’ health. This is perfectly illustrated in their slogan, reflected on all packages ‘Mu(n)ch Better’, a play on the phrases ‘Munch Better’ and ‘Much Better’. The brand attracts an audience of young to middle aged health conscious individuals looking to satisfy their cravings with guilt-free delicious options. This market positioning is a result of a marketing campaign which has allowed them to emphasise innovative and bold new flavours while promoting traditional snacks made from healthier ingredients.
Market Reach	Snackible is primarily an online brand, allowing consumers to purchase products through their website or platforms like Amazon, and fulfilling orders with the help of regional delivery partners. The brand now aims to diversify their supply channels by expanding into retail and other B2B sectors. This approach has made their products available to majorly urban audiences, however, an expansion into retail will allow more rural or underdeveloped parts of India access to their products too.

Product 2: Nourish Organics

Nourish Organics offers a variety of snacks made from organic, plant-based ingredients. Their product line includes health bars, breakfast cereals, cookies, nuts, seeds, and granola, all rich in plant proteins, omega-3s, essential vitamins, natural fiber, and antioxidants. (Refer Appendix C)

Aspect	Analysis
Nutritional Profile	Nourish Organics offers an extremely wide range of health focussed products, including but not limited to, breakfast cereals, nutrient rich cookies, fruit fibre based health bars, and a variety of on-the-go snacks. The brand is based around the clean eating philosophy, a school of thought that prompts one to eat foods free of preservatives, genetically modified organisms, trans fats, artificial flavours and sugars, ensuring the usage of 100% natural and ethically sourced ingredients. The bestsellers, Chia Turmeric and Ginger Oats Cookies reflect their commitment to health and nutrition, containing only 130 kcal and 99.9 kcal per serving respectively. The composition of these products make them great for reducing inflammation, enriching the body with protein and dietary fibre while being packed into a delicious vessel.
Ingredients and Processing	The brand attests to using only quality ingredients that comply with the aforementioned clean eating philosophy, basing a majority of their products on organic components like oats, seeds (flaxseed, watermelon seed, pumpkin seed, sunflower seeds and sesame), nuts like almonds and sweeteners like jaggery or coconut nectar. The brand has become the first in India to utilise aluminum-free baking powder in their baked goods, which helps reduce the risk of heavy metal poisoning and prevent the metallic aftertaste often associated with baked goods. The brand has also committed to being preservative free, going as far as preventing the addition of anything remotely artificial, ensuring their products remain as natural as possible.
Taste and Texture	The flavour profile presented by the company varies based on product, however their bestsellers offer a unique point of view into their crafting process. The Ginger Oat Cookies offer mild sweetness with a bold and warm ginger flavour. The Chia Turmeric Cookies offers a more savoury flavour profile, with hints of spice. Both of these cookies have become known for their crunchy and crumbly texture, even including nuts and seeds to break up the monotonous mouth feel of a cookie. These cookies also include raisins which provide a chewy texture, enhancing the overall mouth feel by including a multitude of textures. These products have come to be loved by consumers, although there are some that find particular products to be too hard or dry, indicating the brand has to offer a variety of textures.
Pricing and Affordability	The brand is positioned in the premium segment of the healthy snack market, wherein a carton containing 10 cookies is priced between INR 200 and INR 250. Many consumers have reported they find the products to be slightly too expensive for the quantity provided, however many others acknowledge their commitment to clean and natural foods and understand the financial challenges when attempting to source healthy, organic produce.
Branding and Positioning	Nourish Organics has positioned itself as the promoter of the clean eating philosophy, developing their marketing strategy to raise awareness about the importance of clean eating practices, holistic well-being, and sustainable consumption. Thus, the brand caters to health conscious individuals who seek nutritious snacking options. Nourish Organics further honed in on this approach by targeting promotional material towards more urban settings, highlighting the consumption of superfoods to people who seek functional foods capable of offering health benefits beyond regular nutrition.
Market Reach	Nourish Organics moved products through various channels including their own website, industry leading e-commerce brands like Amazon, Flipkart, BigBasket, and Zepto, alongside being in over 2000 retail stores across India. Additionally, their products can also be found in premium hotel chains like Taj Group of Hotels and Sheraton. Recently their products have also been featured in the in-flight purchases of India's largest aviation carrier, Indigo.

Product 3: RiteBite MaxProtein

RiteBite specializes in protein-rich snacks, including protein bars, breakfast cookies, and chips. Their products are designed to provide sustained energy and are suitable for fitness enthusiasts and those seeking nutritious snack options. (Refer Appendix C)

Aspect	Analysis
Nutritional Profile	MaxProtein offers a wide variety of products such as protein bars, peanut butter, cookies, chips and even whey and plant based protein powders. As a brand focussed on aiding the consumption of protein, they are able to provide 3 ranges of products, the daily range containing 10g of protein per bar, the active range containing 20g of protein and the ultimate range containing 30g of protein per bar. At the same time their protein powders contain 25g of protein per serving. While not specific, the company claims to boost muscle recovery by including vital nutrients like fibre, minerals, amino acids and more.
Ingredients and Processing	MaxProtein does not have any distinguishing policy when it comes to the usage of ingredients, the strategy is simple - if it has protein, it is usable. Thus, MaxProtein is composed of various protein rich ingredients such as soy, whey, casein and seeds. The company has also innovated in the fields of protein absorption, introducing DigeZyme in whey protein and Pepzyme in plant protein to ensure rapid absorption. The company still manages to cater towards health conscious consumers by being preservative free, avoiding added sugars and artificial sweeteners.
Taste and Texture	The company offers a wide variety of flavours, including but not limited to Irish Chocolate, Kulfi, Alphonso Mango, Swiss Chocolate, and even Jeera Masala to appeal to all audiences. The primary product of MaxProtein is protein bars, which offer a satisfying chewiness, interrupted by breaks of crunchy nuts and crispy additives. This creates an overall mouthfeel that is unparalleled.
Pricing and Affordability	As of 2025, the protein bars are priced between INR 80 and INR 180 based on variant, protein content, flavour and ingredients. On the other hand, information about protein powders and chips are not available as they are new introductions, sold out on most pages. The brand may be in the premium category, but it is able to back its substantial price by providing high-quality, clean foods. However, the price tag of protein bars makes them highly inaccessible to the general Indian public, especially in rural areas.
Branding and Positioning	MaxProtein highlights its commitment to health and nutrition in an innovative way, becoming a pioneer in India's protein-rich snack market. Over the years, they have built a cult following of mainly gym-enthusiasts or so called fitness freaks seeking nutritious and convenient snacking options to support a tiring and active lifestyle. Due to this market positioning, the brand has identified no interest in trying to appeal to a larger segment of the Indian population, sticking to its urban roots and providing unique and holistic health based options.
Market Reach	The products are available through many distribution channels, namely online through their website, or e-commerce giants like Amazon, BigBasket and Flipkart. Notably, MaxProtein bars are present in almost every retail store in India, indicating immense popularity of scope for profit.

Product 4: Yoga Bar

Yoga Bar, a revolutionary company founded by two Indian sisters, Suhasini and Anandita Samapth in 2014. Founded with a strong emphasis on natural ingredients, new and reformist ideologies relating to the food sector. Over the last 11 years, Yoga Bar has successfully created nutritious products which have attracted the gaze of people across the world. (Refer Appendix C)

Aspect	Analysis
Nutritional	Yoga Bar offers a wide variety of products for consumers to choose from, including protein bars, peanut

Profile	butter, breakfast bars, muesli, oats, whey protein and plant based protein. These products are in usage across the world, with their protein bars being their best selling items. A 60g protein bar contains approximately 20g of protein and 260 kcal of energy which is derived from various sources, including but not limited to whey, almonds and lentils. These bars are further reinforced with dietary fibre, omega-3 fatty acids, and other minerals to support development and recovery.
Ingredients and Processing	From the company's founding it has emphasised the use of 100% 'natural ingredients', many times including whole wheat, oats, nuts, millets, dates, seeds and honey in their bars. The company prides itself on manufacturing products from artificial flavouring, colors, hydrogenated oils, preservatives and chemicals. This comes at the cost of extended shelf-life, which is often compromised due to the lack of chemicals and preservatives, this highlights the brand's commitment to natural and chemical-free products over profitability.
Taste and Texture	Yoga Bar is mainly based on sweet flavours, like Chocolate Chunk, Peanut Butter, Nuts and Seeds, Cashew Orange, Vanilla Almond, Cardamom, and Coffee. These are flavours which appeal to a broad range of consumers, within India and abroad. As expected, chocolate chunks and coffee are the best-selling flavours. Yoga Bars are known for their soft and crumbly texture, accentuated with natural oils they use for binding and nourishment. This texture often appeals to Indians due to its similarity to chikki, a traditional crumbly peanut and jaggery based sweet that has been eaten for centuries.
Pricing and Affordability	Given the use of quality ingredients and the reduced profitability due to the lack of preservatives, Yoga Bar finds itself in the premium sector of the market, pricing itself completely apart from competitors within India. The value proposition of this product cannot be understated, holding massive appeal to health-conscious consumers, athletes and those undergoing training.
Branding and Positioning	The brand has become just a little short of a status symbol in today's world, becoming endorsed by many celebrities in India. Owing to the brand's premium positioning, the bar has become a staple in the households of India's elite and social media influencers, serving as passive marketing for the company. Additionally, the brand is currently positioned as a 'guilt-free' snacking alternative, embodying the clean eating philosophy and pledging transparency with consumers, a move that catapulted Yoga Bar to new heights. It is at this time the company has developed a cult following of on-the-go snackers, mostly health conscious individuals. Through word of mouth sales, free of cost influencer marketing, and some traditional advertising, the company has encroached into the homes of India's urban households, becoming a staple in grocery stores.
Market Reach	Yoga Bar is currently available (as of April 2025) in over 10,000 retail outlets across India while also being found on major e-commerce platforms like Amazon, Flipkart, BigBasket, and Zepto. Approximately 60% of these sales come from retail stores, as the product is considered an 'impulse purchase'. Its prevalence in retail outlets and massive presence has culminated in the brand observing 100% year-on-year growth, setting the target of becoming a INR 1000 crore brand in the next 2 to 2.5 years.

Strand 4: Develop a detailed design brief

Secondary Research Brief

Every serving of Snacktive must present an optimal balance of macronutrients and indispensable micronutrients to answer the nutritional demand of children 10-14 years old. Preferably, it must carry 10-15g protein, 6-8g of fiber, and 4-6 mg iron to enhance muscle development, promote digestive regularity, and assure proper delivery of oxygen by the body. Moreover, it must contain 100-150 mg of calcium, 5-10mg of zinc, and necessary vitamins such as B-complex, A, C, and D to enhance immunity, eyesight, and general growth. The fat content must be limited to 5g per serving, making it healthy without adding extra calories. The calorie level should be between 250-350 kcal per serving, making it an effective meal substitute or addition without causing undue weight. To maximize nutrition without exceeding calories, high-fiber, high-protein foods like legumes, seeds, and whole grains must come first while excluding excessive sugar or bad fats. The core of the snack must consist of millets (ragi, bajra), chickpeas, lentils, black beans, oats, or quinoa, all contributing sustained energy, protein, and fiber. Nutrient-dense fruits and vegetables like dates (iron), bananas (potassium), carrots (vitamin A), spinach (iron and folate), sweet potatoes (beta-carotene), and pumpkin seeds (zinc and magnesium) can be added to improve micronutrient content. Children in this age group enjoy appealing flavors such as sweet cinnamon, chocolate, vanilla, honey, peanut butter, mixed berries, and mango,
