

Criterion A: Inquiring and analysing

A1: Explain and justify the need for a solution to a problem for a specified client/target audience.

Interaction between people is lessening drastically day by day. People tend to be more **connected** through social media than have any personal **interaction**. According to my research, It is **observed** that about 57%¹ customers prefer digital communication such as email or social media over voice channels like the telephone or video calls. This percentage shows that the greater half tends to use the internet and digital **communication** over physical interaction, which is a problem. But this problem occurs in children as well. In 2019, 95 percent of 3- to 18-year-olds had home internet access, according to the American Community Survey (ACS)². Specifically, 88 percent had access through a computer, and 6 percent relied on a smartphone for home internet access. This problem is faced all over the world. Indian children are the youngest to reach mobile maturity, said a McAfee study conducted amongst parents and children across 10 geographies. As per the study, smartphone use in the country among children in the age of 10-14 is 83%, which is 7% higher than the international average of 76%. Data from the website shows that children from all over the world regardless of their race/ethnicity are facing the same problem. While the internet has proven to be really useful in the past few years, it is important that people personally and physically meet and interact with other people.

Source A(i): Statistical Data (Research)

This can be achieved through interactive board games. Even though it may seem like playing board games is simple for fun, there are several benefits for the same. Some of these benefits include **practising** and **developing** essential cognitive skills such as decision making, higher level strategic thinking and problem solving. Technology and the internet disconnect us from the real world and children are no longer drawn to spending time with their loved ones physically. Thus, I aim to create a solution that brings people together and reduces the loss in interaction between people.

Source A(ii): My Game Closet

My family owns several board games in our house. Some are multiplayer games while some are individual games. After going through the multiple games in my closet and further **investigating** the existing board games, I came to the **conclusion** that there are various board games that target different skills. Owning board games is not the problem, storing them is. Board games tend to take up a lot of space and hence, the variety of board games in a house is likely to be comparatively less. I aim to create a design that combines many board games and takes up less space. The designed solution should be

specifically **designed** for families with kids above the age of 6 years old. There are no barriers in terms of location as this solution should be convenient for people regardless of their location (For instance it should not matter if you are using this product in Place X or Place Y). This solution should be an interactive, tangible product. This solution will further be **designed** based on the information gathered by the research conducted.

A2: Identify and prioritise the primary and secondary **research** needed to develop a solution to the problem

To further **identify** the design and **determine** the requirements from the solution, additional research was required. This included

¹ Sources for all the given data is mention in Bibliography

² Data Based on Images: Appendix A.1

Primary and Secondary research. To further break down the research conducted, I tried to **inquire** with questions in regards to the ACCESS FM format. This helped me **identify** the necessary information and **process** data. The information regarding the questions asked and its relevance to the solution is mentioned below.

	Question asked to the audience	Primary/ Secondary source	Relevance of Question	Priority ³
A E S T H E T I C S	What are the main colours in any board game?	Secondary- Websites, Existing Products	This information will further help when designing the product. Based on the existing colours of certain board games, I can incorporate the existing colours into the board game. Every board game has a different colour scheme. And based on the colour scheme, it can be incorporated or manipulated to adjust to the overall aesthetics of the product	11
C U S T O M E R	Do the customer and their family play board games at home?	Primary- Survey	The information is relevant to further understand the target audience. These questions will be answered with the help of a survey. With the help of these questions, I can design the ideal product for my target audience based on their likes and dislikes. The question regarding the board games played by the target audience is extremely essential as it allows me to finalise the board games that can be included in my design. Additionally , it is important to understand the target audience preference for the solution that has multiple board games and take up less space. This will further define the relevance of the product.	1
	What boards does the target audience often play?	Primary- Survey		2
	Which of the following board games do my target audience know how to play? Options: Chess, Snakes and Ladders, Scrabble, Blokus, Checkers, Ludo	Primary- Survey		3
	What are your opinions on a product that combines multiple board games?	Primary- Interview, Secondary		4
C O S T	How much do board games normally cost?	Secondary- Existing Products	With the help of the cost of existing board games, I can understand the cost range at which the product is approximately made. Furthermore, this can help me understand how much I should spend on the making of my product.	7
	How much does a combined board game that includes more than 4 boards cost?	Secondary- Existing Products		8
Environment / Material	Which kind of wood is most environmentally friendly?	Secondary- Websites	Based on the cost range, I can try to make this product environment friendly. This question can	9

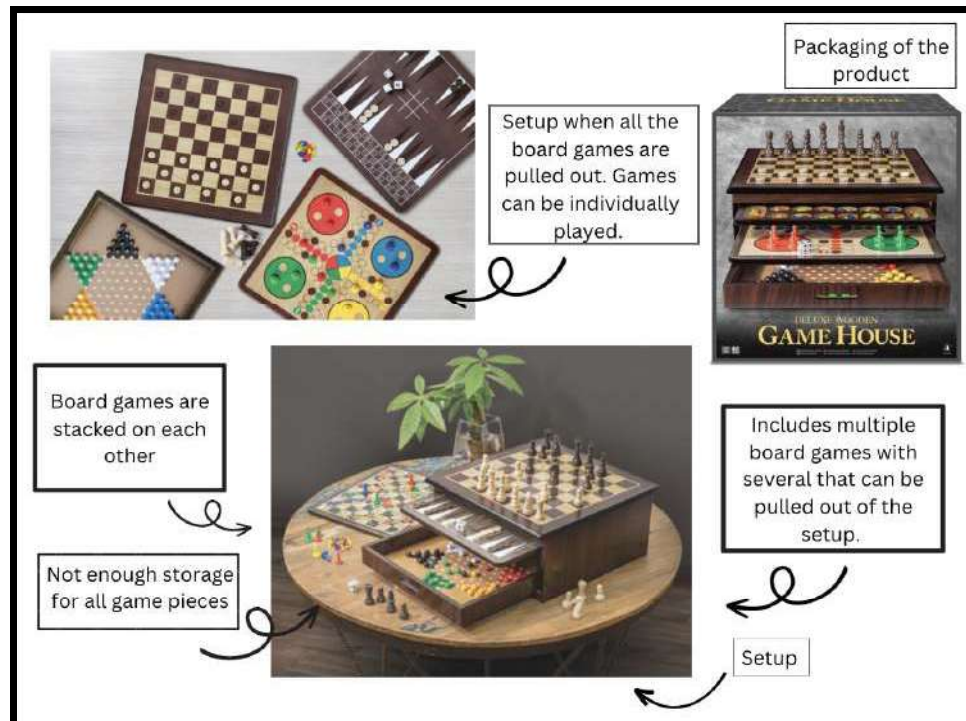

³ Rankings 1-4 is High priority
Rankings 5-9 is Medium Priority
Rankings 10-12 is Low Priority

	How much does 15x15 inches of this wood cost?	Secondary- Websites	help me understand which wood can be used which is environmentally friendly.	
Safety	What are some safety precautions incorporated in board games?	Secondary- Websites	Based on the safety precautions taken in existing board games, I can incorporate such precautions in my product along with certain new precautions.	12
SIZE	What is the average size of a board game?	Secondary- Websites, Existing Products.	The average size of the board can make sure that the product that I aim to create is not too small or too big. This product should include the regular board games in a space saving manner.	10
FUNCTION	What are the most common family board games?	Secondary- Websites Primary- Interview	This product should include commonly played games so that people can enjoy the games and it is popular within all age groups.	5
	How to play Checkers?	Secondary- Instructional Videos	After conducting some research, I learned that checkers is a common game. But I did not know how this game works and the parameters required for this game. And hence I needed to learn how to play the game in order to design the board game.	6

A3: Analyse a range of existing products that inspire a solution to the problem

When creating a solution, It is essential to take into account the existing product that caters to the mentioned problem. We need to evaluate the products based on the strengths and weaknesses. I have chosen 4 different existing products that all fall under the same category that combine board games and bring people together over said games.

Existing Product 1: Deluxe Wooden Game House⁴

⁴ Citation for all existing products are in the Bibliography
